With AV-ATLAS, AV-TEST offers you up-to-date data feeds to improve your detection rate and avoid false alarms.
Flare Whitelist
- Review of current software from over 100 download portals
- Up to 300 new products and 20,000 new checked files per day
- A total of almost one million analyzed software products
- For analysis, the current software is downloaded, installed and executed
- Flare Whitelist offers you current data as input for machine learning and for improving whitelists

Flare Android
- A feed of verified Android apps from third-party stores
- Checks about 5,000 App downloads (in APK format) per month
- Static features such as the app's permissions, the presence of trackers and the source code are evaluated. On the basis of these evaluations, we classify the apps as suspicious or not.
- The analyzed files are downloaded from third-party App-Stores.
- Some of the apps and files are only available outside the Google Playstore
- Google Play Metadata feed with information about of updated, new and removed apps
